

Figure 34: Sample Assembly Drawing With List of Material

8.6.3. Drawing Requirements

When used in the field of the drawing, item numbers shall be enclosed in circular-shaped 1/2-inch-diameter balloons. For drawings of electronic chassis assemblies, if the outlines of resistors or capacitors are shown, the reference designations shall be placed within those outlines when practical. The corresponding find numbers shall be omitted from the views. In such cases, a table shall be provided on the drawing to show the find number assigned to each item that is identified by a reference designation on the views. The same find number shall be used for any group of reference designations assigned to items of identical characteristics. The item or find numbers on any drawing shall be assigned independently of those on any other drawing. Find numbers assigned to subassemblies shown on an assembly drawing shall be distinguished from those assigned to parts by adding a letter suffix to the subassembly find number.
